

HIGHLIGHTS

CA-Engineering is an engineering firm with a strong experience in storm water management, water filtration, and wastewater treatment in the United States, Puerto Rico and Latin America.

The firm is structured to provide engineering services to government and industry on the design of water related structures.

We have vast experience in flood control and river regulation, including erosion and sediment control. We perform hydrologic-hydraulic studies intensively. We are provided with the most updated hydrologic and hydraulic mathematical models for performing these works.

Our services in water and wastewater engineering includes: water distribution systems, potable water filtration plants, water treatment for industrial processes and water storage facilities, wastewater collection systems, secondary and tertiary wastewater treatment plants, industrial pre-treatment facilities, pumping stations.

CA Engineering

Storm Water

Water

Wastewater

STORM WATER MANAGEMENT

- Flood Control
- Sediment Transport
- Scour Analysis
- H/H Studies
- FEMA Flood Map Amendment
- Detention System
- Subsoil Injection
- River Channeling

WATER FILTRATION

- Conventional Filtration Plants
- Reverse Osmosis
- Ion Exchange
- Microfiltration
- Water Distribution System Modeling
- Water Pump Stations
- Water Storage Tanks

WASTE WATER TREATMENT

- Treatment Process Modeling
- Conventional Activated Sludge
- Anaerobic Reactors
- Constructed Wetlands
- Wastewater Pump Stations
- Collection Systems
